**Challenge#1: Goal**

As a web developer aspirant here are my plans in creating my website, so basically my website is all about promoting the tourist spots here in Mindanao. So, the first thing I'll do is Research. I will identify key tourist destinations in Mindanao, considering both popular and lesser-known spots. And conduct thorough research on each destination, including cultural significance and activities. Next is Website Structure and Design Planning the website structure to highlight different regions and attractions. Designing the website with a visually appealing and culturally sensitive theme. Then Content Creation Developing detailed and engaging content for each destination, including historical context and cultural insights. Incorporated with multimedia elements, such as images and videos. And Social Media Presence Building a strong presence on social media platforms to amplify reach. Share visually appealing content and engage with the audience. So this are my plans for my website.
